Election/Restrictions

Applicant's election with traverse of Group I, Claims 1-10, in the reply filed on March 2, 2007 is acknowledged. The traversal is on the ground(s) that there is no burden on the examiner. This is not found persuasive because the inventions are unrelated as set out in the restriction requirement. Further Group I requires no phone circuitry or capability, and is therefore not even expressly capable of carrying out the method steps laid out in Groups II and III. Group III has no sensor, and could be carried out on any phone with camera and call servicing modes. Group II, while containing a Hall sensor, could be carried out on any camera equipped communication device that may be rotated in any way.

Therefore the structure of Group I has only a cursory overlap with Group II.

There is no overlap between Groups I and III as the searches would be completely distinct with NO OVERLAP.

The requirement is still deemed proper and is therefore made FINAL.

Claims 11-13 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on March 2, 2007.

This application is in condition for allowance except for the presence of claims 11-13 directed to an invention non-elected with traverse in the reply filed on March 2, 2007. Applicant is given ONE MONTH or THIRTY DAYS from the date of this letter, whichever is longer, to cancel the noted claims or take other appropriate action (37 CFR 1.144). Failure to take action during this period will be treated as authorization to cancel the noted claims by Examiner's

Amendment and pass the case to issue. Extensions of time under 37 CFR 1.136(a) will not be permitted since this application will be passed to issue.

The prosecution of this case is closed except for consideration of the above matter.

Allowable Subject Matter

Claims 1-10 are allowable.

The prior art clearly discloses communications devices with multiple housings which may be rotated and folded with respect to one another, having 2, 3 or more sections which may be manipulated and thereby affect the operations of the communications device. The prior art further discloses examples of foldable/rotatable communications devices which use a Hall sensor to detect and define positions for use in determining device operations.

The present claims define a device with multiple housing each having specific folding and rotating relationships with respect to each other, as well as a battery pack used as a grip and having a specific movement arrangement with respect to the other housings, and the use of the sensor, in combination with the other defined limitations, which senses when the battery is rotated. When incorporating all the limitations in combination, none of the prior art discloses the specific structure as claimed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lim (US 6,701,166), Opela (US 2004/0204122), Sato (US 2004/0048633), and Lim (US 7,020,504) disclose communications devices with folding/rotating sections the position of which may be detected using a detector, such as a Hall Sensor.

Lee (US 6,125,289), Oshima (US 7,076,280), Crum (US 2004/0077388), Oh (US 6,865,400), Hirai (US 7,092,626) and Wu (US 6,975,890) disclose foldable/rotatable housings on communication devices with multiple sections.

Koenck (US 5,410,141) discloses a communications device with a battery grip.

This application is in condition for allowance except for the following formal matters:

Non-elected claims 11-13, as noted above, must be cancelled.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 25 USPQ 74, 453 O.G. 213, (Comm'r Pat. 1935).

A shortened statutory period for reply to this action is set to expire **ONE MONTH** from the mailing date of this letter.
